WEBSITE DESIGN & DEVELOPMENT BRIEF

The Design Dude Studio

A minimal, editorial-style website blueprint for a creative studio combining content, design, social media and digital growth.

PRIMARY GOAL
Turn visitors into qualified enquiries while making the studio’s creative work the hero.

DESIGN FEEL
Premium • Minimal • Confident • Contemporary • Fast • Mobile-first

CORE EXPERIENCE
Strong opening statement → visual proof → clear service categories → case studies → client trust → simple enquiry.

Prepared as a direct handoff for the website developer. Use this as the structure and experience guide; final copy, portfolio assets, client approvals and contact details can be inserted before launch.

01 / Website strategy

The site should feel like a curated creative portfolio—not a long agency brochure. Keep the copy short, let real work carry the visual impact, and give visitors clear routes to explore services or enquire.

Audience

Brands, retailers, founders, event businesses, real-estate brands and service businesses looking for creative content and digital growth.

Main conversion

A qualified enquiry via a short form or WhatsApp. Every major section should offer a clear next step without feeling sales-heavy.

Primary navigation

Work · Services · About · Testimonials · Contact. Keep the header compact and sticky only if it stays unobtrusive.

Tone of voice

Direct, warm, confident and modern. Avoid generic claims like “we are the best”; show proof through work, outcomes and client feedback.

Recommended site map

Page	Purpose	Primary CTA
Home	A fast, visual introduction to the studio	Start a project
Work / Projects	Filterable portfolio and case studies	Discuss a similar project
Services	Clear service categories and deliverables	Get a quote
About	Studio approach, process and team/founder story	Work with us
Testimonials	Client trust and proof	Start a conversation
Contact	Short enquiry form and direct contact routes	Send enquiry

02 / Homepage: exact section order

Build the homepage as a scroll journey. Each section should have one job, a strong visual and a clear transition to the next.

01	**Header / navigation**	Logo on the left; Work, Services, About, Testimonials and Contact on the right; one small “Start a project ■” button. Mobile: compact menu and persistent enquiry CTA.
02	**Hero / first screen**	Large headline: “We make brands impossible to scroll past.” Supporting line: “Content, design and digital marketing built to make your brand stand out and grow.” CTA buttons: “Explore our work” and “Start a project”. Use one strong showreel or a carefully selected collage.
03	**Selected work / visual proof**	A 2–3 column editorial grid of 4–6 standout projects. Each tile has a cover image/video, client/industry, service tags and a short outcome. Use hover motion subtly; tap opens the case study.
04	**Studio snapshot**	One concise paragraph about the studio and its approach. Add 3 compact proof points only if verified (e.g., projects delivered, industries served, years of experience). Avoid made-up numbers.
05	**Services / 4 main compartments**	Four large cards: Content & Video, Social Media, Advertising & Growth, Branding & Design. Each card lists a few examples and links to its full service details.
06	**Featured case study**	One deep-dive project: the challenge, creative idea, deliverables and verified result. Use a strong before/after or a video-led layout when assets are available.
07	**How we work**	A 4-step strip: Discover → Plan → Create → Optimise. Keep each step to one sentence so the section is scannable.
08	**Testimonials**	2–4 approved client quotes with name, brand and role where permission is granted. Optional video testimonial. Do not use fabricated reviews.
09	**Final CTA / contact**	Large closing line: “Have a good idea? Let’s make it happen.” Button to enquiry form and a WhatsApp link. Keep contact details visible and simple.
10	**Footer**	Logo, short descriptor, navigation, email/phone/social links, service area if relevant, copyright and privacy link.

03 / Service compartments

Present the four main categories as distinct cards on the homepage. On the Services page, expand each into a clear overview, list of deliverables and relevant work samples. Keep the list comprehensive but easy to scan.

A. Content Creation & Video Production

Videography · Brand films · Reels and short-form videos · Event coverage · Product and fashion shoots · Interviews and testimonials · Behind-the-scenes content · Creative direction · Scriptwriting and hooks · Storyboarding · Video editing · Motion graphics · VFX and CGI ads · 2D/3D animation · Colour grading · Sound design · Subtitles and cutdowns.

B. Social Media Management

Social media strategy · Monthly content calendar · Platform management · Content planning · Caption writing · Hashtag and keyword research · Reel and carousel planning · Publishing and scheduling · Stories and community engagement · Profile optimisation · Monthly reporting · Content performance review.

C. Advertising & Digital Growth

Paid social campaigns · Meta Ads (Instagram/Facebook) · Google Ads / search campaigns · Campaign strategy · Audience and competitor research · Creative testing · Lead generation · Retargeting · Funnel planning · Landing-page recommendations · Conversion tracking coordination · Performance reporting and optimisation.

D. Branding, Design & Creative

Logo and identity design · Brand guidelines · Social media creatives · Campaign posters · Promotional graphics · Brochures and catalogues · Pitch decks and presentations · Packaging / print design · Website UI direction · CGI product visuals · Event and launch creatives · Creative concepts and art direction.

Optional add-on services (show only if offered)

Website design and development · Landing pages · SEO foundations · Email/WhatsApp campaign creative · Influencer campaign coordination · Brand launch strategy · Content repurposing for YouTube/shorts · Consultation and creative audits.

Service page layout for each category

- **1. Short intro:** who the service is for and what it helps achieve.
- **2. Deliverables:** grouped into 4–8 scannable items, not a wall of text.
- **3. Process:** brief → plan → production → review/delivery.
- **4. Related work:** 2–3 portfolio items using that service.
- **5. CTA:** “Tell us what you’re building” or “Request a proposal”.

04 / Portfolio and case studies

The work should be the most convincing part of the website. Use real, high-quality assets and prioritise projects that demonstrate range and outcomes.

Portfolio index page

• Filter chips: All · Video & Reels · Social Media · Advertising · Branding & Design · Events (adjust to the work actually available).

• Project tiles: thumbnail, client/brand, category, year if useful, and a one-line project descriptor.

• Use a mix of video thumbnails, campaign creatives, brand identities and social content; keep tile sizes varied only if the grid remains orderly.

• Do not autoplay sound. Use a muted, lightweight preview only where it improves the experience.

Case study detail template

Block	What to include
Project intro	Client/brand, industry, services provided and one-line summary.
The brief	The client’s goal or challenge in plain language.
The creative response	The idea, content direction, visual system or campaign approach.
Deliverables	Specific outputs actually delivered, such as reels, campaign assets, identity or ad creatives.
Results / impact	Only verified metrics or approved qualitative outcomes. If metrics are unavailable, focus on the creative work rather than inventing results.
Gallery	Final assets, short clips, screenshots or behind-the-scenes images.
Next step	Related project links and a CTA to discuss a similar brief.

05 / Testimonials and trust

• Show 3–6 concise, approved testimonials. Use exact client wording or get approval for edited quotes.

• Each testimonial should include quote, client name, brand, role (if approved) and optional brand logo/headshot.

• A horizontal slider is acceptable, but do not hide all testimonials behind a carousel; show at least one or two immediately.

• Optional video testimonials should have captions and a poster frame.

• If there are not enough approved testimonials yet, use a “Selected clients / industries” strip or short project notes instead. Never create fake testimonials.

06 / Visual design direction

Aim for a restrained editorial aesthetic with generous whitespace and strong creative assets. The site should feel bespoke, not like a generic agency template.

Colour palette

Warm off-white background (#FAF9F6), near-black text (#171717), soft grey dividers (#E5E2DB), and one energetic lime accent (#C8F169) for small highlights and primary actions. Keep accent use selective.

Typography

Pair a modern sans-serif with a characterful display face. Use large headlines, short paragraphs, generous line-height and clear contrast. Avoid too many font styles.

Layout

12-column desktop grid, generous margins, consistent spacing system and aligned edges. Let imagery break the grid occasionally, but maintain rhythm.

Imagery

Prioritise original project work. Use full-bleed video or large images sparingly; keep previews compressed and consistent. Avoid generic stock imagery where real work exists.

Motion

Subtle reveal on scroll, restrained hover states, smooth anchor scrolling and micro-interactions. No excessive parallax, long intro animations or motion that blocks content.

Voice

Short, active copy. Specific over vague. Avoid long paragraphs, buzzword-heavy writing and repetitive CTA buttons.

Interaction and UX rules

• Mobile-first responsive layouts; verify at small phones, large phones, tablets and desktop widths.

• Keep navigation and CTAs consistent across pages. On mobile, make enquiry/WhatsApp access easy without covering content.

• Make portfolio filters functional and keyboard-accessible; provide clear empty states.

• Respect reduced-motion preferences. All video content needs a poster image and should not force sound.

• Use visible focus states, accessible colour contrast, descriptive alt text and labelled form fields.

• Compress images, serve responsive sizes, lazy-load below-the-fold media and avoid heavy scripts.

07 / Contact and enquiry flow

Keep the enquiry form short enough to complete on a phone. The goal is to start a conversation, not collect every detail upfront.

Field	Requirement
Name	Required
Brand / company	Optional
Email or phone	At least one required
What do you need?	Required dropdown: Video / Content, Social Media, Ads / Digital Marketing, Branding / Design, Website, Other

Field	Requirement
Estimated budget	Optional ranges, including “Not sure yet”
Project details	Optional short text area
Submit	Button: “Send project enquiry” with clear success and error messages

- After submission: show a clear confirmation and expected response window only if the studio can commit to one.
- Provide direct email, phone and WhatsApp links in the footer and contact page. Insert verified details before launch.

08 / Technical and SEO checklist

Area	Developer requirement
CMS / editing	Use a CMS or simple admin workflow so the studio can add projects, update service text and replace testimonials without code edits.
Portfolio media	Support images, vertical reels, horizontal videos and thumbnails. Prefer external video hosting or optimised delivery for heavy files.
Performance	Responsive images, modern formats, lazy loading, minimal third-party scripts, caching and fast first-screen rendering.
SEO basics	Unique page titles and meta descriptions, one clear H1 per page, descriptive image alt text, canonical URLs, sitemap.xml, robots.txt and social share metadata.
Analytics	Install consent-appropriate analytics and track CTA clicks, WhatsApp clicks, form starts/submissions and portfolio engagement.
Accessibility	Semantic headings, keyboard navigation, form labels, visible focus states, contrast checks and reduced-motion support.
Security	HTTPS, spam protection on forms, secure CMS credentials, backups and updated dependencies.
Legal	Add privacy policy and cookie notice if applicable to the analytics/tracking setup; confirm all portfolio assets and logos are cleared for use.

09 / Suggested starter copy

Hero headline: We make brands impossible to scroll past.

Hero subheading: The Design Dude Studio brings content, design and digital marketing together to help brands show up with clarity, creativity and consistency.

Services intro: From the first idea to the final edit and campaign, we create the assets and systems that help your brand move forward.

Process: Discover the brief. Build the direction. Create with intent. Learn and optimise.

Closing CTA: Have a good idea? Let’s make it happen.

These are starting points, not locked copy. The developer should keep text editable so the studio can refine it later.

10 / Assets to prepare before launch

The developer can build the structure first, but the site will only feel premium if the source material is prepared and curated.

• Logo in SVG or high-resolution transparent PNG, plus approved light/dark versions if available.

• A short showreel or hero video, with a static poster image and mobile crop.

• 6–12 strongest portfolio projects, each with client/brand, category, deliverables and approved assets.

• 3–6 genuine testimonials with written approval and correct names/roles.

• Studio description, founder/team photo if desired, and a simple process explanation.

• Verified email, phone, WhatsApp, social links and service-area wording.

• Any approved case-study metrics, permissions for client logos, and clearances for third-party assets.

• Brand font files/licences and colour values if a formal brand system already exists.

Definition of done

• A visitor can understand what the studio does within the first screen.

• All services are grouped into the four main compartments and are easy to scan.

• Work samples and case studies are easy to browse on mobile.

• Testimonials are genuine and correctly attributed.

• Every main page has a clear enquiry route.

• The site is responsive, accessible, fast, editable and tested before launch.

THE PRINCIPLE
Keep the interface quiet. Let the work be loud.
